

Table of Contents

Theme 1: We Need Energy

Introduction, Goal and Objectives37

Theme Activities

Grades K-4

Classroom Energy Flow38

Students create an energy flow diagram of their classroom by labeling and describing how objects in their classroom transfer energy.

Energy from Food40

Students are introduced to food as an energy source, and feel their heart beat before and after exercise to learn that physical activity requires energy.

Evidence of Energy42

By investigating motion, sound, heat, and light, students learn that they and other objects in the classroom use energy.

Exploring Heat44

Students conduct simple experiments to explore properties of thermal energy and heat.

Sun, Wind, Water47

Students use art skills to emphasize the role of energy in the water cycle.

Taking Temperatures50

Students use a thermometer to investigate how shading, coloring, and other factors affect temperature.

Grades 5-8

Energy Use in an Ecosystem55

Students survey different environments and investigate how sunlight, soil moisture, temperature, and wind affect living elements—plants and animals—in an ecosystem.

Food Chain Game57

By playing an outdoor tag game, students simulate the transfer of energy between organisms in a food chain.

Potentially Kinetic62

Through simple demonstrations, students are introduced to the presence of potential and kinetic energy in their lives and test their knowledge through a tic tac toe game.

Station Break66

Students conduct simple investigations to identify different ways that energy conversions take place.

At Watt Rate?69

Students complete a survey to determine how much electricity various appliances in their home use.

Community Energy Use73

Students survey local residents and businesses to learn how their community uses energy.

Diminishing Returns77

Students illustrate the concept of energy efficiency through a relay race.

People Power82

Students discover the difference between work and power by climbing stairs slowly and quickly and also learn to convert from one unit of power to another.

Roasted Peanuts88

Students investigate how much energy is stored in foods by burning a peanut and calculating how many calories of heat are released.

Grades 9-12	
Puzzling Wisconsin's Biological Communities	93
<i>Students identify different Wisconsin biological communities based on hearing a series of energy-related clues.</i>	
Comprehensive Theme Activity:	
Energy Story	99
<i>Students develop a story that creatively and accurately incorporates fundamental and essential energy-related concepts. This story can be used as the performance standard for the theme "We Need Energy."</i>	
Theme 2: Developing Energy Resources	
Introduction, Goal and Objectives	107
Theme Activities	
Grades K-4	
Digging for Coal	108
<i>Students simulate the coal mining process using chocolate chip cookies.</i>	
Electric Charades.....	112
<i>Students illustrate through a whole-body demonstration how electricity flows from the power plant to appliances in their classroom.</i>	
Fueling Around	114
<i>Students design a collage or a mobile that displays activities that depend upon the combustion of energy resources.</i>	
Waterwheels, Windmills, and Turbines	117
<i>Students use a pinwheel to investigate the energy in wind and water.</i>	
Where Does It Get Its Energy?	120
<i>Students classify things they like to do under the source of energy required.</i>	
Grades 5-8	
Circuit Circus	122
<i>Students construct and experiment with simple electrical circuits using batteries, wires, and bulbs.</i>	
Electric Motors and Generators	127
<i>Students build a model electric motor, experiment with magnetic induction, and investigate how motors and generators are used to meet many of the energy needs of modern society.</i>	
Energy Divide	131
<i>Through a "tragedy of the commons" simulation, students demonstrate how conservation (reduction of use and waste) together with the development of renewable resources contribute to ensuring the availability of energy supplies to future users.</i>	
Fuel That Power Plant	137
<i>Students use mapping skills to locate Wisconsin's major electric power plants and their fuel supply routes, and also investigate why modern power plants are located next to bodies of water.</i>	
Get That Gasoline	142
<i>Students sequence career titles of those responsible for oil extraction and refining to learn what is involved in manufacturing gasoline for automobiles.</i>	
Harnessing Nuclear Energy.....	147
<i>Students use dominoes to model a nuclear chain reaction and read how a nuclear reactor works.</i>	

Shoebox Solar Cooker	150
<i>Students build and use a simple solar oven.</i>	
So You Want to Heat Your Home?	154
<i>Students calculate how much fuel is needed to heat a home and recognize how different fuels and different heating system efficiencies contribute to the cost of home heating.</i>	
Grades 9-12	
The Miracle of Solar Cells	158
<i>By conducting a series of experiments with solar cells, students learn how solar cells can be used to generate electricity.</i>	
Comprehensive Theme Activity:	
Energy Debate	161
<i>Through a debate-oriented discussion, students report basic facts regarding energy resource development, and highlight advantages and disadvantages of each.</i>	
Theme 3: Effects of Energy Resource Development	
Introduction, Goal and Objectives	169
Theme Activities	
Grades 6-8	
Advertising Energy	170
<i>Students study energy-related advertisements to analyze how they do or do not promote energy efficiency.</i>	
The Cost of Using Energy	174
<i>Students calculate the cost of energy used by various end uses found in the home and at school.</i>	
Dealing with Nuclear Waste	177
<i>Students use pennies and a shoebox to model the half-life of radioactive material, read information about nuclear waste disposal, and write a position paper that advocates a specific nuclear waste disposal option.</i>	
The Dirty Half Dozen	182
<i>Through a card game, students match criteria air pollutants generated through the use of energy to their effects, and identify ways these pollution problems can be solved or prevented.</i>	
Energy Use Then and Now	187
<i>Students research energy use practices of the past and compare them to energy use practices of the present.</i>	
Reading Utility Bills	192
<i>Students observe and interpret a customer's energy consumption patterns over the course of a year by reading utility bills.</i>	
Reading Utility Meters	202
<i>Students observe and interpret daily and weekly patterns of energy consumption by reading utility meters.</i>	
Grades 9-12	
Driving Reasons	206
<i>Students calculate a car's fuel efficiency and analyze how to reduce fuel and environmental costs when driving.</i>	
Energy Prices and the Laws of Supply and Demand	210
<i>Using the laws of supply and demand, students demonstrate how energy prices are determined and how they can change.</i>	

Viewpoints	220
<i>Students use research skills to investigate various viewpoints surrounding the issue of global warming.</i>	
Comprehensive Theme Activity:	
Energy Investigations	227
Theme 4: Managing Energy Resource Use	
Introduction, Goal and Objectives	235
Theme Activities	
Grades 6-8	
Don't Throw Energy Away	236
<i>Students analyze the energy used to make a product and identify alternatives (reduce, reuse, recycle) to throwing away the product and its energy.</i>	
Why Use Renewable Energy?	246
<i>Students analyze the results of interviews with home and business owners to determine why they use renewable energy.</i>	
Grades 9-12	
Careers in Energy	249
<i>Students investigate energy-related careers through research, interviews, and job shadowing.</i>	
Energy Futures	253
<i>Students analyze trends of energy use in Wisconsin, explore consequences of the trends by using a Futures Wheel, and use scenario writing to envision a plan that addresses these effects.</i>	
Comprehensive Theme Activity	
Energy Action Plan	257
<i>Students develop an action plan that addresses an issue related to energy resource management.</i>	
Energy Sparks	
K-5 Energy Sparks for Theme I	269
Energy Use at Home	269
Energy and Transportation	270
Energy Use in the Workplace	270
Exploring Heat	271
Exploring Sound	271
Simulate a Sound Wave	272
Exploring Light Energy	273
Exploring Movement	273
Exploring Magnetic Forces	274
Shocking Static Electricity	276
K-5 Energy Sparks for Theme II	277
Introducing Energy Resources	277
Introducing Renewable and Nonrenewable Resources	277
Fossil Fuel Products	277
Sunvestigations	278
Windy Wonders	281
Water Fun	282
Electricity in Our Lives	282
Simple Machines	283

K-5 Energy Sparks for Theme III	286
Energy and Culture	286
Comparing Energy Use in the Past and Present	288
Consumption Patterns.....	289
Energy and the Environment.....	289
Analyzing Appliances	289
Analyzing Different Modes of Travel.....	289
Electrical Safety	290
K-5 Energy Sparks for Theme IV	291
Be an Energy Saver	291
6-12 Energy Sparks for Theme I	293
First Law of Thermodynamics.....	293
Second Law of Thermodynamics	294
Perpetual Motion Machines	294
Energy Pyramids	295
6-12 Energy Sparks for Theme II	297
Energy Flow through Biological Communities	297
Energy Costs of Food.....	297
Transporting Energy Resources	298
Energy Resources in Literature.....	298
Energy Production Timeline	298
Nuclear Energy.....	298
Explore Resource Development Technologies.....	298
Energy Conversions in an Automobile Engine	299
Make a Light Bulb	299
Human Population Growth and Energy Use	299
Make a Light Bulb Activity Sheet	300
Investigation Ideas for Theme III	302
Lifestyles.....	302
Energy and Transportation	303
Energy and Health and Safety	303
Energy and the Environment.....	304
Energy and Economics	307
Sociopolitical Issues	307
Energy and Culture	307
Action Ideas for Theme IV	309
Energy Efficiency Measures	309
Insulation and Air Infiltration	310
Space Heating, Water Heating, and Air Conditioning	311
Major Home Appliances	313
Small- and Medium-Sized Electrical Appliances and Equipment	314
Transportation	314
Energy Efficient Landscaping	315

Wisconsin Model Academic Standards.....	369
--	------------

Selected Teaching Strategies

Basic Brainstorming.....	380
<i>Guide your students through an effective brainstorming session.</i>	
Converting KEEP's Assessment Ideas into Rubrics.....	381
<i>Adapt the formative and summative assessments provided in the activities into rubrics.</i>	
A Decision-Making Model—A Tool for Analysis.....	384
<i>Help students use a matrix to evaluate the pros and cons of various solutions to energy-related problems.</i>	
Energy Learning Logs.....	385
<i>Instruct students to use journaling techniques to record, review, and process what they observe and learn about energy.</i>	
Creating an Energy End Use Survey Plan.....	387
<i>Help students monitor and manage their energy use.</i>	
Read and Explain Pairs.....	388
<i>Have pairs of students take turns reading sections of text and interpreting the content to their partners.</i>	

Energy and Power Conversion Factors.....	389
