

GEOGRAPHY 101: CALCULATING YOUR GRADE

	Your grade (%)	Weight	Points towards final grade
Exam 1:	_____	× 0.17	= _____
Exam 2:	_____	× 0.17	= _____
Exam 3:	_____	× 0.17	= _____
Quiz Average:	_____	× 0.35	= _____
Labs & Assignments:	_____	× 0.14	= _____
Your final grade is the sum of all your points:			= _____

Example: Suppose you get 85.4% on the first exam:

$$\text{Exam 1: } \quad \underline{85.4} \quad \times \quad 0.17 \quad = \quad \underline{14.5}$$

Thus, a grade of 85.4% on an exam is worth 14.5 points out of a maximum of 17 points towards your final grade. Since each exam is worth 17% of your final grade, this is equivalent to 17 points out of 100.

Lab quizzes are worth 35% of your final grade, which is equivalent to 35 points out of 100. Calculate your average quiz grade, which equals the sum of your five quiz grades divided by 5. Then enter your quiz average in the table above to determine the points you have earned towards your final grade.

Your grade (%)	
Quiz 1: _____	Sum of your five quiz grades = _____
Quiz 2: _____	Divided by 5 = _____
Quiz 3: _____	This is your quiz average.
Quiz 4: _____	
Quiz 5: _____	

Lab exercises and assignments are worth 14% of your final grade, which is equivalent to 14 points out of 100. Sum the total number of labs and assignments you successfully completed. Divide this sum by the total number of activities assigned. This equals the percent of labs and assignments completed. Enter this value in the table at the top of the page.

$$\begin{array}{l} \# \text{ of activities completed} \quad / \quad \# \text{ of activities assigned} \quad \times \quad 100 \quad = \quad \text{percent of activities completed} \\ \underline{\hspace{2cm}} \quad / \quad \underline{\hspace{2cm}} \quad \times \quad 100 \quad = \quad \underline{\hspace{2cm}} \end{array}$$
