FACILITY SERVICES ANNIVERSARIES

CONGRATULATIONS TO THE
FOLLOWING EMPLOYEES
WHO ARE CELEBRATING AN
ANNIVERSARY AT UWSP IN
MARCH

TODD WIPPERFURTH

Carpenter
15 years of service

ADAM JOHNSON

Academic Custodian
10 years of service

Thank you for your service!

A WHOLE LOT OF POTENTIAL 'BEST FRIENDS' ARE HAPPIER IN PORTAGE COUNTY.

Thanks to a gift of gently used sleeping bags, towels and bedding delivered to the Humane Society of Portage County by staff members of Facility Services, the soft and cuddly gifts could have been destined to a landfill but were instead thoughtfully gathered and given a second life... helping dogs and cats feel safe and sound as they await a new 'forever' home.

The Humane Society of Portage County gladly accepts donations of towels, blankets and bed clothes for use in kennels and adoption spaces. The animals need soft and clean bedding to stay warm, snuggle and sleep. PCHS offers a heartfelt appreciation for the donation!

Visit www.hspcwi.org for more information on how you can help.

GO GREEN with T.E.A.M.!

In celebration of St. Patrick's Day...

WEAR GREEN TO WORK

Stop by your break room to enjoy some cookies provided by T.E.A.M.

DATELINE: MARCH 23, 2001

The storied history of the Mir space station includes collisions, a fire, and political change. But it also consists of unprecedented long-duration space-flights and scientific studies – and without it, the International Space Station may never have been built. Fifteen years ago, the journey of the 15-year-old Russian space station ended. On March 23, 2001, Mir re-entered the Earth's atmosphere near Nadi, Fiji, and fell into the South Pacific. The planned and controlled re-entry began when the engines of a cargo ship docked to Mir were fired causing the station's orbit to brake, starting Mir's descent.

From 1995-1998 seven US astronauts lived on board Mir as part of the Shuttle-Mir program, preparing the United States and Russia for cooperative efforts on the ISS.

Investigations performed aboard Mir –which means “peace” in Russian, include space technology experiments, remote sensing and environmental monitoring, life science and biological research, astrophysics studies, material processing tests, and medical and biotechnology experiments.

Have you ‘surfed’ over to the new look Facility Services web pages yet? Facility Services pages are currently under construction in the hope of providing visitors to the pages a pleasing, interactive experience. As part of this effort, the new Custodial Work Unit pages went 'live' late last year and the Recycling and Grounds Work Unit pages went 'live' during the first week of March, 2016. More updates to pages will follow.

Visit www.uwsp.edu/facsv/Pages/default.aspx to have a look!
