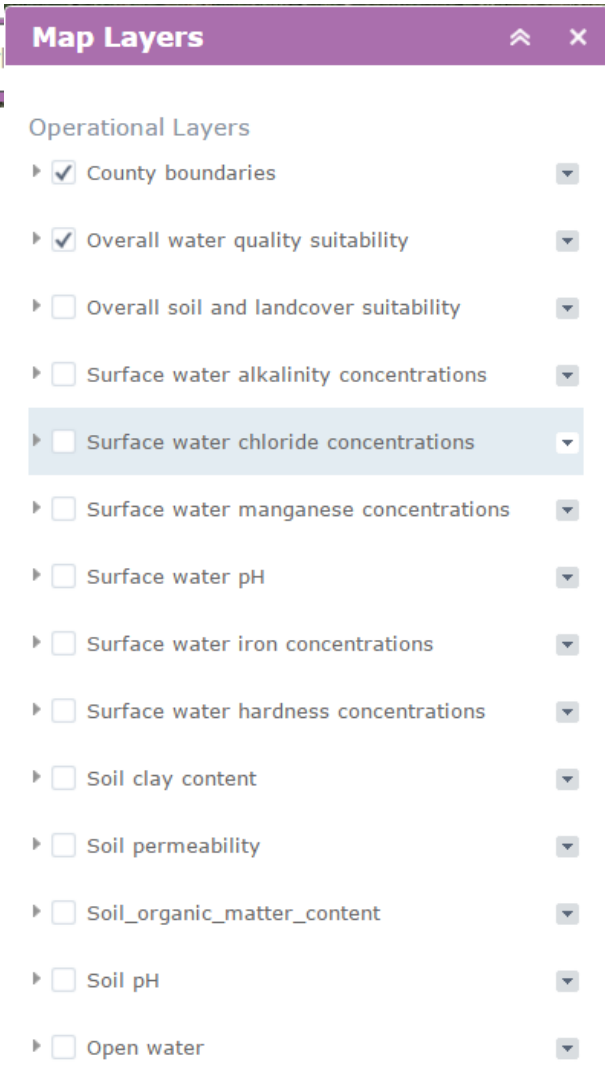
Guide on how to use this Web Map

Interact with Data Layers:

- Click on the **Map Layers** button to view and interact with various data layers that are available for viewing.

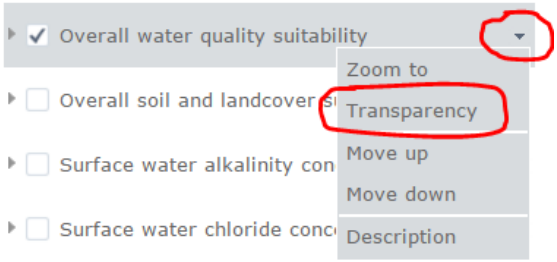


- Click to turn **Operational Layers** on and off.
- Placing a checkmark next to a layer will activate and display the data on your web map.
- You can turn more than one layer on at a time; however, the top-most layer on the list will display in front of the other layers.
- A list of **Operational Layers** is shown in the sample diagram.

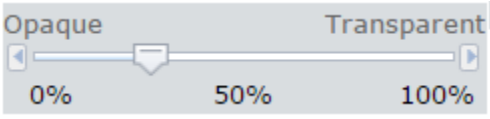
Change Layer Transparency:

You can change the transparency of any data layer through the **Map Layers** panel.

- Click on the down arrow to the right of the layer name and select **Transparency**.

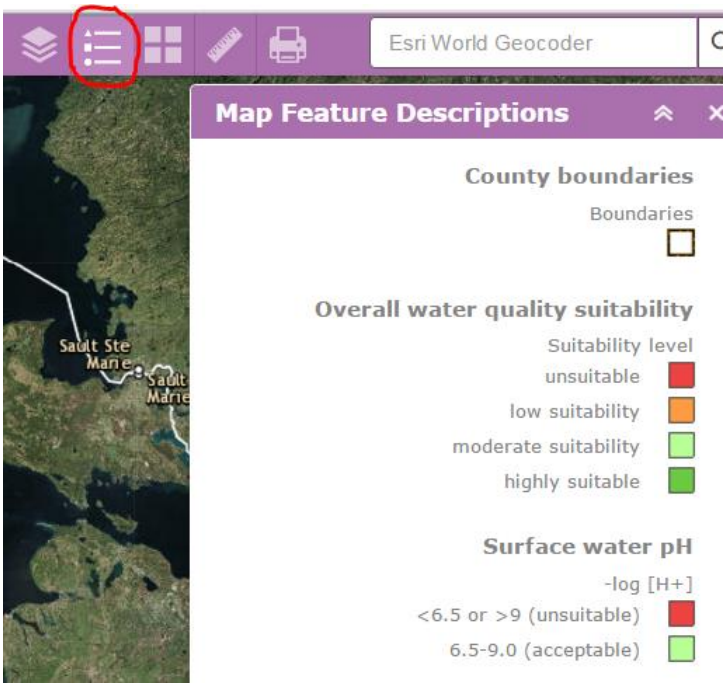


- Use the slider bar to make the layer visibility more or less opaque.



Map Feature Descriptions (Map Legend)

- Once a layer or layers are turned on, you can view map feature descriptions by clicking on the **Map Feature Descriptions** button.
- Here you will find information pertaining to model variable threshold levels with units of measurement and overall suitability ranking.



Modify Background Map

By default the application opens with an aerial image for a background map with locations labeled. You can switch your background map to other desired backgrounds such as streets, topographic, terrain, or OpenStreetMap.

- Click on the **Background Map** button and select your desired background.
