

Sprayer Calibration

Lee Shambeau
4 Control

Backpack Sprayer

- Measure an area 17 x 20
 - ◆ This is equal to 1/128 of an acre

Backpack Sprayer

- Time how long it takes to spray the 17x20 area
 - ◆ Repeat 2x or 3x and average them

Backpack Sprayer

- Spray into a measuring pitcher for the length of time it took to spray the 17x20 area
- Measure that amount in ounces and that is equal to the gal/acre that your sprayer is putting out.
- $32 \text{ oz.} \times 128 = 4,096 \text{ oz.} = 32 \text{ gal.}$

Pump-Up Sprayer

- Measure an area 17x20
 - ◆ This is equal to 1/128 of an acre

Pump-Up Sprayer

- Fill sprayer up & mark with a line

Pump-Up Sprayer

- Spray Area to desired coverage

Pump-Up Sprayer

- Fill sprayer back up to the line and subtract what you have left from what you started with
- $32 \text{ oz.} - 14 = 18 \text{ oz.}$ or
- 18 gal. per A.
