Community Connections

Adding a trail through the business park would give the opportunity for future development. Looking into the future, the Northwest corner of the business park could be a potential connection to add a trail that leads to the downtown of the village. To the west, there is a trail system that links trails within the Business Park could link to the existing Tomorrow River Trail which connects from Pewee to Manawa. Encouraging this trail system could provide an expansion of recreational activities and promote economic growth for Amherst due to increased activity.

Trails

To implement minimal additions of impervious surfaces, trails are utilized within the Conservation Business Development. This concept not only benefits the environment but is a great way to increase walking accessibility that uses the existing Business Park. The trails will be placed along the perimeter of the site and throughout the site to allow for additional development to create a trail system within the Conservation Business Development.

The purpose of the amphitheater is to provide a community space for a variety of local events, such as outdoor concerts, school events, and a multipurpose gathering place. This will also be a great connection to the Conservation Business Development and local businesses.

Conservation Business Development

While conservation subdivisions are typically done within residential sites, our vision is to take the concept of a conservation subdivision and apply it in a commercial site essentially replacing residences with businesses. Principles of this case study can be applied to the Amherst Business Park Development. Our vision for the Amherst site consists of:

- One central parking area for the entire business park site.
- No further development of roads other than existing infrastructure within the site.
- Well lit, wide, flat paths that are easily accessible to all ages and easily maintained in all seasons.
- Promoting local businesses and community events.
- Spaces for community gathering and recreation.
- A central path that encircles the development site, with the idea that this path acts as a central pedestrian right-of-way through the site (additional smaller connector paths can further allow for pedestrian access to areas within the site).
- Connection to downtown Amherst and the central business district via a trail connection to downtown.
- Greenspaces being a central feature to the paths, feeling more like a park than an urban environment.
- Access to local businesses and amenities directly off the path.

Amherst Conservation Business Development

The illustration above shows a master plan for the Amherst Business Park and surrounding sites. The map includes adding an amphitheater, pavilion, a playscape, and local businesses. Around and throughout the business park trails will be added to connect the different activities and greenspace areas.

"The Village of Amherst - small town atmosphere with big city possibilities."

Nature Playscape

Incorporating areas in the community like a playscape for children is a great aspect when trying to bring in a younger demographic. When families are looking to move into the community it is important to have areas that appeal to them so they can take younger kids. Incorporating trails and physical structures that are kid-friendly can increase the number of younger families that move into the community.

Pavilion

For a community to fully benefit from parks and other recreation opportunities the area needs to have a pavilion as well as other essential amenities for everyone. A pavilion would be a great choice as it is a multipurpose facility; a great area for hosting social events, a community space for a picnic, an area for a and a facility that can offer recessions when outdoors setting.

Local Businesses

Designing businesses in conjunction with community open space provides social economic benefits that increase local revenue and employment. Increasing the local economy increases community engagement and instills a greater sense of pride in the community.

The following goals are implemented in our on the Conservation Business Development

- Promote Walkability Within the Community
- Promote Local Establishments
- Create Green Space and Implement Sustainable Design/F
